

StanceGuard

StanceGuard

WITH ULTRA-FRESH TECHNOLOGY

Rest easier knowing all Stance Healthcare products with exposed wood come standard with StanceGuard, an innovative finish featuring high abrasion resistance and an antimicrobial additive known as Ultra-Fresh Technology. The Ultra-Fresh Technology is incorporated into a catalyzed varnish finishing process to ensure long-lasting beauty and healthier environments.

The antimicrobial agents in the additive work constantly to stop the reproduction, growth and spread of bacteria, which is a crucial concern in healthcare environments. Preventing harmful bacteria from growing and spreading ensures a healthier healing process and quicker recovery.

Our conversion varnish is extremely resistant to abrasion and chemicals such as acetone, vinegar and ammonia-based cleaners, rubbing alcohol and bleach.

In summary, the combination of Ultra-Fresh Technology and a conversion varnish makes StanceGuard one of the most durable finishes available today.
